

Title: Project Progress Report – EvveClinic Online Booking & SMS System

Date: April 1, 2026

Prepared by: Ahmed Sereta

1. Project Overview

2. The EvveClinic project focuses on creating a seamless online booking experience for patients, combined with automated communication through SMS notifications. The system ensures efficient appointment scheduling while keeping patients informed in real time.

2. Achievements to Date

Frontend (React):

- Developed a fully functional online booking interface for patients.
- Implemented form validation and user-friendly UI for creating appointments.
- Connected the booking system to the backend API for data storage and retrieval.

Backend Integration:

- Integrated the website with a backend SMS service to automatically notify patients upon booking confirmation.
- Ensured real-time synchronization between the booking system and SMS notifications.
- Implemented reliable appointment creation flow with backend validation.

System Features:

- End-to-end booking process fully functional and linked with SMS alerts.
- Automated notifications improve patient engagement and reduce missed appointments.
- System is ready for scaling to multiple appointment types and future enhancements.

3. Next Steps / Pending Tasks

- Implement booking history and management dashboard.
- Add SMS status tracking to monitor delivery success.
- Expand notification channels to include email, instagram, whatsapp or in-app messaging.
- Optimize backend performance for handling high booking volumes.

4. Summary

The EvveClinic online booking system is fully operational with integrated SMS notifications, creating an automated and reliable patient appointment workflow. This provides a strong foundation for further enhancements in patient communication, analytics, and multi-channel notifications.
